

CMC compost seminar

... Shared knowledge about compost and organic waste treatment.

Our experienced trainers share knowledge about compost, soil, plants and the environment, natural laws and their correlations from their own experience and daily application.

The training program also covers important topics such as material flow management, quality assurance, system design, water, mass and air balances or the application of compost, soil substrates or compost tea.

For us, it is important to demonstrate the link between theory and practice. Accordingly, hands-on work takes place directly on-site, where participants can learn about process

control, turning interval, water balance and measuring equipment.

The training course is targeted at plant operators as well as consultants, plant designers, compost users, lab assistants and anyone interested in compost and its effect.

You will find more information on the course programme as well as registration for the next CMC intensive course here: 

We look forward to welcoming you on one of our courses. Please register early as places are limited.
